

# CARBON NEUTRAL

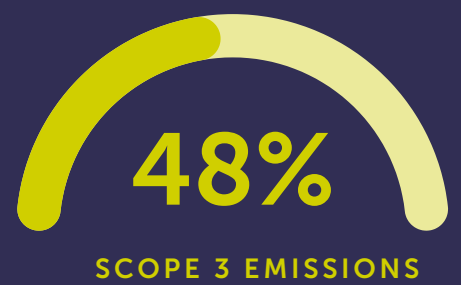

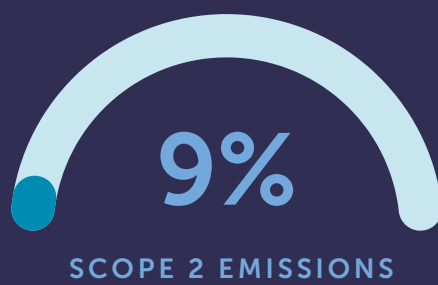

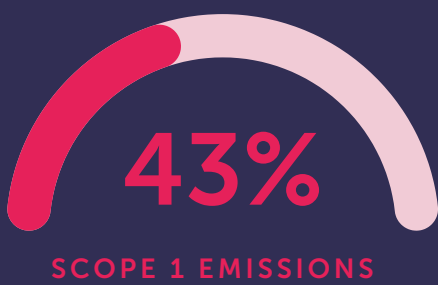

Addressing the climate emergency is a key priority for Quartz Project Services. Understanding and addressing the impact that we as a business create on the environment and society is of pressing importance. By engaging all employees to champion sustainability for not only our organisation but also our clients, will help move us forward in the fight against climate change.

LIMIT GLOBAL TEMPERATURES RISING BY **1.5°**  
**BY 2030**

**"We are committed to reducing our environmental impact and being a business operating for good."**

In order to fully understand and ultimately reduce our environmental impact we have worked with RLJ Consulting to carry out a full Greenhouse Gas Inventory of Quartz's business operations. Looking at Scope 1, 2 and 3 for 2020. This is the first step in allowing Quartz Project Services to become Carbon Neutral and in the future a Net Zero Carbon organisation.

**54.2**  
TCO2e

**Facility Operations**

**50.8**  
TCO2e

**Business Travel**

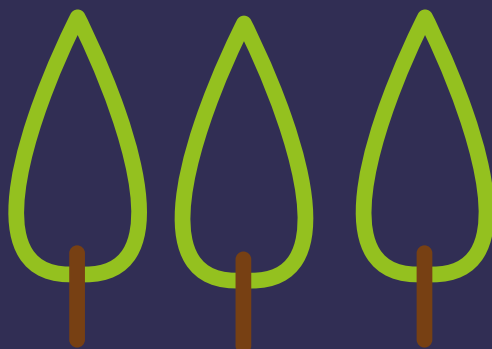

Our largest emitting activities are associated with office operations and business travel. These are currently core functions of our business and are required activities. However, they are within our control and we are dedicated to reducing the total emissions where feasibly possible. All Quartz employees are champions of sustainability and operate with an eco-conscious outlook.

Our total TCO2e is the equivalent of a **630,720 km car journey**

**420**  
Trees needed to offset TCO2e

"Carbon Neutrality is the target on our sustainability agenda."

Now we fully understand the impact that our organisation has on the environment, we are committed to ensuring that our future impact is as positive as it can be. We will be offsetting our carbon emission for 2020 to ensure that we are a carbon neutral business.

## Next Steps...

Setting reduction targets to reduce future emissions

Implement policies to increase data accuracy

Continue to champion sustainability across the business

Work towards B Corp Certification

Select a method to offset our 2020 emissions
